

51

```
open( 'filename', 'r', encoding='utf-8' )
```

Opening ...ok...

How about closing ?

```
open('filename', 'r', encoding='utf-8')
```

file path

./some/folder/to/file/name
some/folder/to/file/name
/absolute/path/to/file/name
../parent/search/to/file/name
../../../../bla/bla/file/name

mode

'r' for read
'w' for write
'a' for append

Eh...guess...

Opening ...ok...
How about closing ?

Automatic closing

```
with open('filename', 'r', encoding='utf-8') as the_file:
    for line in the_file:      # the_file is iterable, yeii !
        print(line.rstrip())  # Removing the trailing \n
                               # since print() adds one.
```
