```python
def functionName( parameters ):

    someValue = ...  # Make it something

    # Some code with someValue
    # using parameters (or not!)
    #
    # Some more code

    return someValue
```

Might have a default value

* Positional arguments

* Keyword arguments

```python
    # Some code for x1, x2 and x3
    v = functionName( parameters )
    # Some code using v
```

39

```python
def functionName( parameters ):
    "Documentation" # Usually a triple quote

    someValue = ... # Make it something

    # Some code with someValue
    # using parameters (or not!)
    #
    # Some more code

    return someValue
```
